

Instructions

Topical Use of Herbal Poultice Vitae Elixir

You will need a plastic container with a tight-fitting lid large enough to hold 2 pints of the herbal poultice solution. Shake both pints well, then pour into the container. Soak a lightweight face cloth or something similar in the solution. The cloth should be large enough to cover the affected area. Use rubber gloves when you wring out the cloth. Keep the cloth moist. Apply the entire cloth topically over the affected area. The right amount of saturation is after 10 to 15 seconds; the poultice will start to drip slightly off the sides. Leave on 5 to 20 minutes or until a strong burning sensation is felt. Then remove the cloth and place into the container for use the next day. Wash the solution off with soap and water. Repeat this process every day for a minimum of 60 to 90 days or longer. To relieve any itchiness or dryness apply 100% pure aloe vera gel. If there is too much discomfort discontinue poultice for a few days or reduce application time.

Stains may be removed with a mixture of Clorox and water, lemon juice or white vinegar.

Keep us informed as to symptoms, usage & progress.
